Hi Bill,

This morning we have some problems with out Server but now it's ok.  
I received your email.

The device you ask for, was developped about 3 years ago. We are thinking for an upgrade  
... anyway thats the main features:

- TX: Usb - RF interface (434MHz) auto power via usb, embedded antenna on PCB.
- RX: need 12V power supply, Radio RX, 4 relays (5A 250Vac). DipSw to set address (up to 16 different addresses). 1 TX can manage up to 16 RXs.

Distance (free air 10-15 m).

Ascii commands.

I Attached a windows program (just to have an idea of the simple use, see .rar).

Let me know if you need a quotation.

-

For your order: Today or tomorrow we will deliver to DHL.

About INVOICE: the total price will be 345 euro (not 348,44 euro) because your bank transfer was a little less  
... -3,44 euro less than due.

I attached 2 Android apps to test BlueDimmer 6 chs and BlueDimmerLT 3 chs.

The open command for BlueDimmerLT to change luminous intensity is:  
.\$DMx:yyy<CR>, that is (ASCII codes): 0x2E (.), 0x24 (\$), 0x44 (D), 0x4D (M), x = number of channel to set in  
ascii that is 0x31 (1) or 0x32 (2) or 0x33 (3), next char is: 0x3A (:), then put the value of intensity: string of ascii  
code (numbers), and at the end Carriage Return <CR>: 0x13.

example: .\$DM2:128<CR> set ch2 @ 128  
Valid values for yyy = 0 ... 255

Bye  
Carlo
