

Steps

1. Use Ipconfig in Windows to find out the **IPv4 Address**.
2. In SQL Server Configuration Manager for **IP1** use the IPv4 address (as per step 1).

```
Administrator: Command Prompt

C:\Windows\system32>ipconfig

Windows IP Configuration

Ethernet adapter Ethernet:

    Connection-specific DNS Suffix . : Home
    IPv4 Address. . . . . : 
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . :
```

Settings in SQL Server Configuration Manager
